

SE-Electrofishers

SE 300 and SE 500 is CE approved

SE 300 and SE 500 electrofishers are tested by Intertek (Semko) in Sweden and meet all the new requirements from the EU. The SE 300 and SE 500 are CE approved and has undergone all the tests necessary to meet legal requirements in the EU.

Made in Denmark

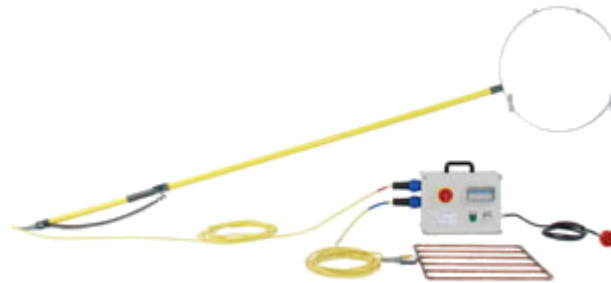

The electrofishers are developed by Stampes Elektro in cooperation with The Technical University of Denmark (DTU). They are all manufactured in Denmark by skilled craftsmen who take pride in good work and who are experts in their field. Spare parts are always in stock, so modifications and new equipment can be quickly delivered.

Easy and safe to use

The electrofishers are simple and easy to use. There is also a strong emphasis on security. The anode and cathode have different connectors, so that they can not be connected incorrectly. Safety features include a main power switch and a movable dead-man's switch. The dead man switch ensures that the voltage on the anode is removed when the button is not pushed.

Do you want to know more

SE 300 is used for wade fishing in smaller streams

Electrofishers SE 300 and SE 500

The electrofishers allows you effective and humane collection of live fish associated with population analysis, labeling of fish, sweeping of roe or capture of fish during adjustment and restoration of streams.

Why choose SE electrofisher

The electrofishers are designed with a focus on the user experience. They are built of strong and durable components and is therefore a reliable and waterproof device. Electrofishing can take many hours and therefore the anode rod is made of lightweight materials and the dead man switch can be moved to different positions on the anode rod so that the user can find the most ergonomically correct position that is just right - regardless of height and water depth.

News: New control box

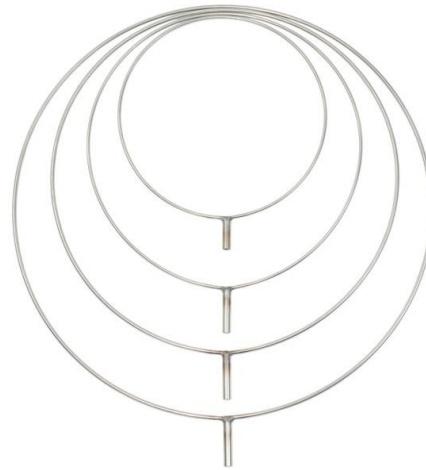

It is now possible to get a control box with built in volt and ammeter, which makes it easier to set the electrofisher equipment so it can be used in different types of streams. The new box can also show changes in the stream.

Special anode ring to wade fishing in shallow water

Anode rings in sizes from 30 cm up to 60 cm

Opportunity for individual adaptation

Most of the components, such as rings and cables can be customized so the electrofisher matches your individual needs and desires.

Additional equipment for electro fishing

As a new feature, you can now buy landing nets and tubs with measurement trays that will ease your work when you need to make population analysis. The landing net is custom-made and the masks can be changed to different sizes so the net can be used for spring and autumn fishing. The edge of the grid is made of heavy nylon, which is very durable and ensure a longer life for the net.

The measuring tray is made of stainless steel and has no sharp edges, so you gently and effectively can measure how big the fish are. The tub is made of Hammarplast and is incredibly durable.
